

Ordering app requirements

Customers order ahead for pickup from any of our three shops.

Key points:

- Customers choose a shop, a pickup time and a basket of items.
- Orders can be changed until two hours before pickup.
- The shop sees each order on a tablet in the kitchen.
- Payment is taken at checkout through the card provider.

Tasks:

- Write the order flow screens
- Agree the cut-off rule with the shop managers

Decision: Pickup only for version one. Delivery comes later.
